

How to create a Cyclopt Project:	1
How to automatically generate base tasks on Cyclopt using Usereq:	1

How to create a Cyclopt Project:

Only one member from each team has to create a Cyclopt Project and add their team members.

1. First login to Cyclopt's Management platform¹
2. Click "Create Projects". Please indicate your team's Number to the name of your project, based on the number declared on e-learning.
 - a. For already created projects, you can modify their names from Project "Settings" on Cyclopt Managment.
3. Select your organization: e.g. "Software Engineering 2 - 202x-202y"
4. Add your team's members **and the course instructors:** (usernames: asymeon, karanikio, dcnatsos, GSiach13)

How to automatically generate base tasks on Cyclopt using Usereq:

Only one member from each team has to follow this process:

1. After you have successfully created your Cyclopt Project
2. Login to Cyclopt Managment Platform
3. In the top right click the user icon
4. Select "Profile", "OPENAPI", "GENERATE TOKEN"
5. Go to Usereq² and select your team's project
6. In the top right go to "Settings", "Integrations" and paste your Cyclopt token here
7. Click "CHECK API TOKEN"
8. Select your team's project
9. Click "SAVE INTEGRATION"
10. Base tasks will be autogenerated to your Cyclopt project
11. Enhance your tasks as needed, creating new ones where needed, adding assignees estimated points, priorities and due dates, and manage them accordingly throughout the semester.
